How to correctly add images into forms

- 1.) This process should be followed for both Survey 123 & Collector.

- 2.) Once the survey has been completed and the user is at the final stage (adding photos).

## Survey 123

## Collector

- 3.) Once user has camera open on device: User must make sure the camera is on left side of device facing direction of the “Approach Terminal” or “Crash Cushion”. (Shown in the photo below from the objects view.)

4.) This will insure that the photos are shown properly once opened after submission.

Note: if photos are taken with device setup any other way they'll be rotated incorrectly and make it difficult to view. This "How To" covers all device platforms used for ArcGIS.
